CLIQ® FAQs

What is the CLIQ Data Center (DCS)?

The Digital Content Server (DCS) provides services related to the CLIQ Web Manager. Here, system data is stored, certificates are created and extended, and any firmware required is made available.

In the case of hosting systems, the CLIQ Web Manager is permanently connected to this server; purchasing customers can interrupt the connection and log on to this server manually.

If you are a purchasing customer and do not have a permanent connection, you must log in directly to DCS as described here (2.1 MB)
