CLIQ® FAQs

How do I receive my system data for CLIQ Manager?

The system data for the CLIQ Local Manager software is provided in .els format to the CLIQ partner for the respective system. This always happens when keys/cylinders are reordered and produced.

The CLIQ partner transfers or sends the system data directly to the user for import into the CLIQ Local Manager software. As an end user, please always ensure that you have the latest CLIQ Local Manager version. Otherwise you may receive an error message when importing. You can obtain this from your CLIQ partner.
