

Assigning programming tasks to other programming keys

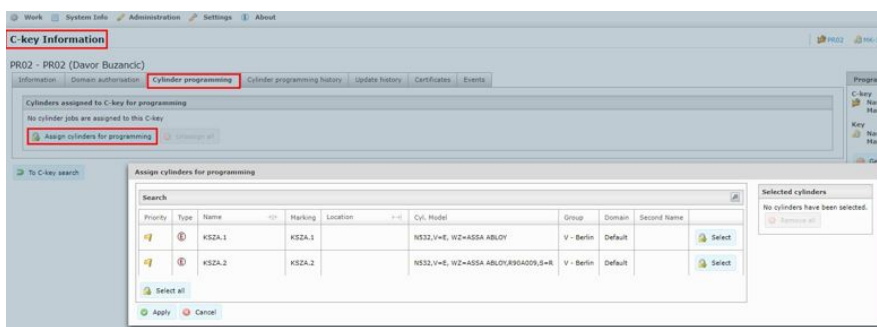

You have the option of assigning programming jobs that you have created yourself in the system to other programming keys!

Watch our user video:

[CLIQ Web Manager - Assigning programming tasks to other programming keys - YouTube](#)

Or follow these steps:

- Afterwards, do not go to the item "Work Programming" but to "Administration Programming Key".
- There, select the desired PN/PSM that is to reprogram for you.
- For this key, go to the "Cylinder programming" tab
- Click on "Assign cylinder for programming".
- All cylinders that have a programming job appear. Select the desired cylinders.

The owner of the PN/PSM then receives an e-mail that cylinder programming is available for his key.

Es gibt Änderungen in den Zylinder-Updates, die Ihrem Schlüssel zugeordnet sind: PSM01
Bitte aktualisieren Sie Ihren Schlüssel in einem Programmiergerät.

- Diese E-Mail wurde automatisch von CLIQ Web Manager gesendet

There are now the following possibilities:

- The owner of the PN/PSM can load his programming key with the jobs directly in the CLIQ Web Manager software.
- The owner of the PN/PSM goes to a remote device and downloads the programming jobs to his programming key from there.
Requirement:
 1. At least firmware 12.3 for the programming keys
 2. At least firmware 5 for the remote units
- He then receives an e-mail with an overview of the cylinders that he has to programme.
- After programming, the programming key is inserted back into the remote unit for an update. The programming jobs are

deleted from the key!

- A final email indicates whether all programming jobs have been completed.

We recommend assigning a maximum of 30 jobs to the programming key in this way.
