CLIQ® FAQs

How to download certificate bundle (CCB file) from DCS?

The server certificate is generated in the DCS and can be downloaded by the DCS Admin.
It is important that the remote server address is stored in the DCS.

If you do not use a remote server and the CLIQ Web Manager (CWM) without wall programming device, at least tell us the host name of the CWM server.

The "Bundle" can only be downloaded if these details are stored. Otherwise, please contact us at software.de@assaabloy.com, stating your system number.

To download the bundle:

1. Log in to the DCS
2. Go to "Manage Sites" and then "View".
3. Select the appropriate "Deployment Environment" and select "View".
4. Select "Download certificate bundle" here and save the file

The certificates created in this way are valid for 2 years and must then be renewed again.
