

## How will the bundle of certificates (CCB file) be actualised on the server?

In order to be able to use the certificate bundle for a new installation or to use it in an existing installation, it must be downloaded in advance by the DCS Admin in the DCS. Further information on the exact procedure can be found here: Certificates download in DCS

The respective installer of the CLIQ Web Manager is required for updating. This should be available to you; if necessary, consult your DCS Admin.

- 1. Execute installer
- 2. Accept licence agreements
- 3. Select new "Certificate bundle" and go to "Next"

4. The bundle has been replaced
