

What are the IP addresses of the CLIQ Web Manager (Hosting) for configuration of a firewall?

Domain names (DNS) are used when operating the CLIQ Web Manager. These refer to IP addresses, which can change.

A general specification of the domain names and the IP addresses is not useful in advance.

Various servers are available and the URL addresses (domain names/DNS) are only specified in the initialisation e-mail for the new CLIQ master key system.

If you still want an overview of the known addresses, you will find it in the following FAQ:
