

FAQs

How does the owner of the programming key create a security certificate with begin of version 9.x? (Enrolment Video/Film)

As of CLIQ Web Manager version 9.1, the creation of the security certificate for the programming key is facilitated. This certificate is required to log in to the CLIQ Web Manager software using your programming key to manage your CLIQ master key system.

The creation is done via the [CLIQ Connect PC](#) App from version 1.7. You can see the exact procedure in the enclosed videos.

There is a special feature when saving security certificates in the Firefox browser.
