

Reference project:
eCLIQ is the ideal solution
for Wiener Linien

ASSA ABLOY

The global leader in
door opening solutions

Reference project: eCLIQ is the ideal solution for Wiener Linien

The infrastructure of Wiener Linien also includes 109 subway stations.

Wiener Linien operates the biggest transport network in Austria with numerous train, tram and bus lines. The tram network is even the sixth largest in the world.

Characteristics

Object:	All buildings of Wiener Linien GmbH & Co KG (subway stations, office buildings)
Branch:	Infrastructure
Number of employees:	around 8,700
IKON components:	eCLIQ master key system, currently with 2,000 cylinders (final expansion approx. 25,000 cylinders)
ASSA ABLOY partner:	PKE Electronics AG

Challenge

With 8,700 employees, Wiener Linien is one of the biggest infrastructure companies in Austria and a subsidiary of Wiener Stadtwerke GmbH. The company builds and runs the subway, bus and tram network in the city and ensures that 2.6 million passengers reach their destination quickly, safely and comfortably every day. Thus imposing special requirements for a locking

system. Wiener Linien requires individual and flexible access authorisations for employees and external companies. Locking cylinders must also be resistant to the special installation conditions to which they are exposed. There should also only be one master key system for the entire company – a variety of different locking solutions were previously in use.

Solution

Wiener Linien chose eCLIQ based on the performance of the system to fulfil the security requirements over the long-term and to guarantee lasting investment security: The eCLIQ electronic locking system from IKON brand offers full flexibility with state-of-the-art management of locking systems. The uncomplicated and reliable solution is distinguished by robust, durable and

secure components, as well as its compact form and striking design.

Another key factor was having an innovative supplier in ASSA ABLOY, that brings international experience as a global market leader to ensure that the requirements of large projects can also be met.
