The optimal solution is an IKON brand product.

Project reference:
Civil engineering and road construction firm Rath secured with eCLIQ

Managing Director Benjamin Rath:

"With the eCLIQ locking system, we have found the perfect system. The system offers us the highest possible flexibility with minimal administrative effort."

Characteristics		
	Premises:	Rath GmbH & Co. KG, Haiterbach
	Area:	Construction
	Employees:	approx. 100
	ASSA ABLOY components:	eCLIQ master key system from the IKON brand
	ASSA ABLOY partner:	Otto Wagner GmbH & Co. KG, Freudenstadt

Challenge

Rath GmbH & Co. KG is a medium-sized construction company with around 100 employees, based in the Black Forest. The name has stood for quality in construction for more than 110 years. The range of services includes civil engineering and road construction, raw material extraction and the recycling of building materials. The new building for the company headquarters and workshops required a locking system that not only secures the new office building, but also the entire company. Theft is a major issue on construction sites, which is why site security is important.

Solution

The medium-sized construction company has opted for an eCLIQ locking system for the many different application cases. With the electronic keys, employees are thus able to operate all locks, from padlocks to construction trailers and administration buildings. New users or new devices can be easily integrated into the system, authorisations can be granted or withdrawn in no time thanks to the software included.
