RheinfelsQuellen rely on
eCLIQ master key system

ASSA ABLOY

Experience a safer
and more open world

The optimal solution
is an IKON brand
product.

Project reference:

RheinfelsQuellen rely on eCLIQ master key system

“We are very satisfied
with eCLIQ and would
choose this secure and
flexible locking solution
time and time again,”
says Marcus Schlötels,
Project Manager at
RheinfelsQuellen
H. Hövelmann
GmbH & Co. KG.

Characteristics

Project:	RheinfelsQuellen H. Hövelmann GmbH & Co. KG, Duisburg
Category:	Food
Employees:	650
Capacity per year:	approx. 700 million litres of mineral water and other non-alcoholic beverages
ASSA ABLOY components:	eCLIQ master key system from IKON with around 530 cylinders and 400 keys
ASSA ABLOY partner:	Eisen Schütz Nachfolger GmbH, Duisburg, Germany

Challenge

RheinfelsQuellen H. Hövelmann, headquartered in Duisburg, is a family-owned company with a long tradition. The beverage group has been in run by the Hövelmann family since 1905 and is currently in its fourth generation. The product range includes the nationally distributed brands Sinalco, Aquintell and Staatl. Fachingen, as well as brands distributed in North Rhine-Westphalia such as Rheinfels Quelle, Römerwall, Burgwall-bronn, Ardey Quelle, Urquell and Rheinperle.

A company like RheinfelsQuellen is always on the move: new divisions are being established, employees relocate and processes change. Suppliers, craftsmen and the company's own personnel come and go. This means that access authorisations change on a regular basis. At the same time, the areas and locations to be protected require different security levels as well as high weather resistance in outdoor areas.

Solution

Rheinfelsquellen, with its headquarters in Duisburg and other locations in North Rhine-Westphalia, opted for an eCLIQ master key system. In addition to administrative buildings, production and outdoor areas are also secured. eCLIQ, the purely electronic system from the CLIQ® family, offers a high level of protection against tampering and intelligent attacks. The keys are also extremely robust, have a waterproof casing and thus fulfil the high demands in challenging environmental conditions.

This master key system can be managed independently with CLIQ® Web Manager using a flexible, easily scalable cloud-based platform. This means that the data can be accessed via the system at any time and from any location. The software is especially well suited for managing large master key systems or for multiple locations which are far apart.
