IKON locking cylinders: Complete precision for over 90 years

Since the invention and patenting of the profile cylinder in 1928, IKON mechanical master key systems have proven themselves in countless buildings, whether in companies, institutions or residential buildings. They impress due to their reliable technology, perfect precision, high quality and proven long life cycle.

The locking cylinders also offer optimum protection against common burglary methods.

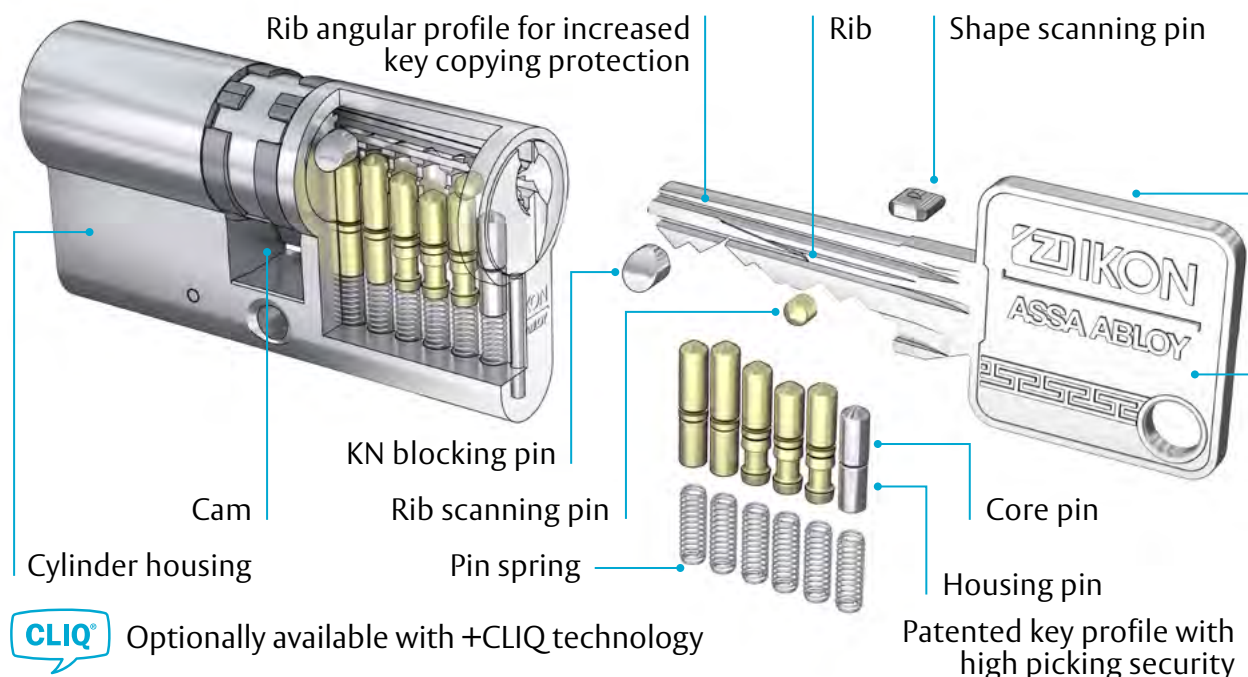

No matter how large or complex your locking system becomes, our service is there to assist you for a lifetime. IKON mechanical locking systems are thus future-proof solutions and undeniably a worthwhile investment.

In particular, the new high-quality **vector profile rib with SAT=KN** offers seven additional advantages as a **service profile**, combined with an excellent price performance ratio, which you will find on the right.

The assignment of the keys can be identified with ten coloured pins, which are available as an option. That makes it much easier to manage keys.

Vector profile rib KN as service profile 6 pin tumblers with spring assist + 3 lateral scanning pins

1

Detailed service records

With the service records, we offer you comprehensive documents with all the necessary information relating to the service profile.

2

All-round carefree service case

The service case is equipped with all necessary individual parts (e.g. core pins, housing pins, springs) and tools for pinning and repinning the cylinders. All individual parts required for installation can of course also be ordered separately.

3

Comprehensive compatibility

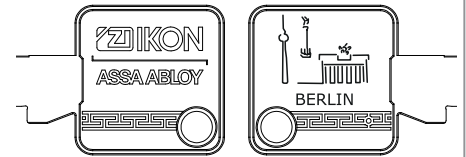

You can use your existing machine fleet as the system is compatible with all conventional key cutting machines. We will be happy to provide you with the technical data for key milling.

4

Individual client logo

Your one-sided, individual key labelling can be implemented using the laser process.

5

Helpful tutorials

Installation of the pre-assembled service cylinders is extremely simple. Short and concise installation videos will support you in this.

6

Flexible, fast delivery times

With the help of the service profile, you can act rapidly and flexibly towards your customers. For example, you can make duplicate keys directly and give them to your customers right away.

7

Flexible modular solution

The new service profile is optionally available as a modular system: Extensions for cylinder cores and housings, couplings and crossheads enable the locking cylinders to be adapted to the length directly on site in a simple and rapid manner.

The ASSA ABLOY Group is a global market leader in access solutions. We help people to feel safer and more secure and experience a more open world every day.
