## CLIQ® Go – the system for electronic locking

Long-lasting, secure and efficient

CLIQ® Go is a cloud-based system with an app and operates with Android and iOS tablets and smartphones and Windows PCs.

The microelectronics in the programmable, waterproof key and the compact electronic locking cylinder guarantee maximum security – reliably and without complications. CLIQ® Go solves the problem of lost keys. Because every key is individually programmable, locking rights can be deleted easily – no matter where you are.

Simple and quick installation of cylinders without wiring

New future-oriented CLIQ® chip generation with AES encryption and fast processing speed

Blocking rail

Rotor

The electronic contact between keys and locking cylinders serves to transmit both power and data securely

Spring with earth contact

Drive

Keys and cylinders can be programmed with flexible locking authorisations and schedules

Waterproof and dust-proof key head with battery and electronic board. Quick replacement of the standard battery!

1 While you are on the go, you receive a message that a key from your locking system has been lost! You block the lost key with CLIQ® Go app on your smart phone.
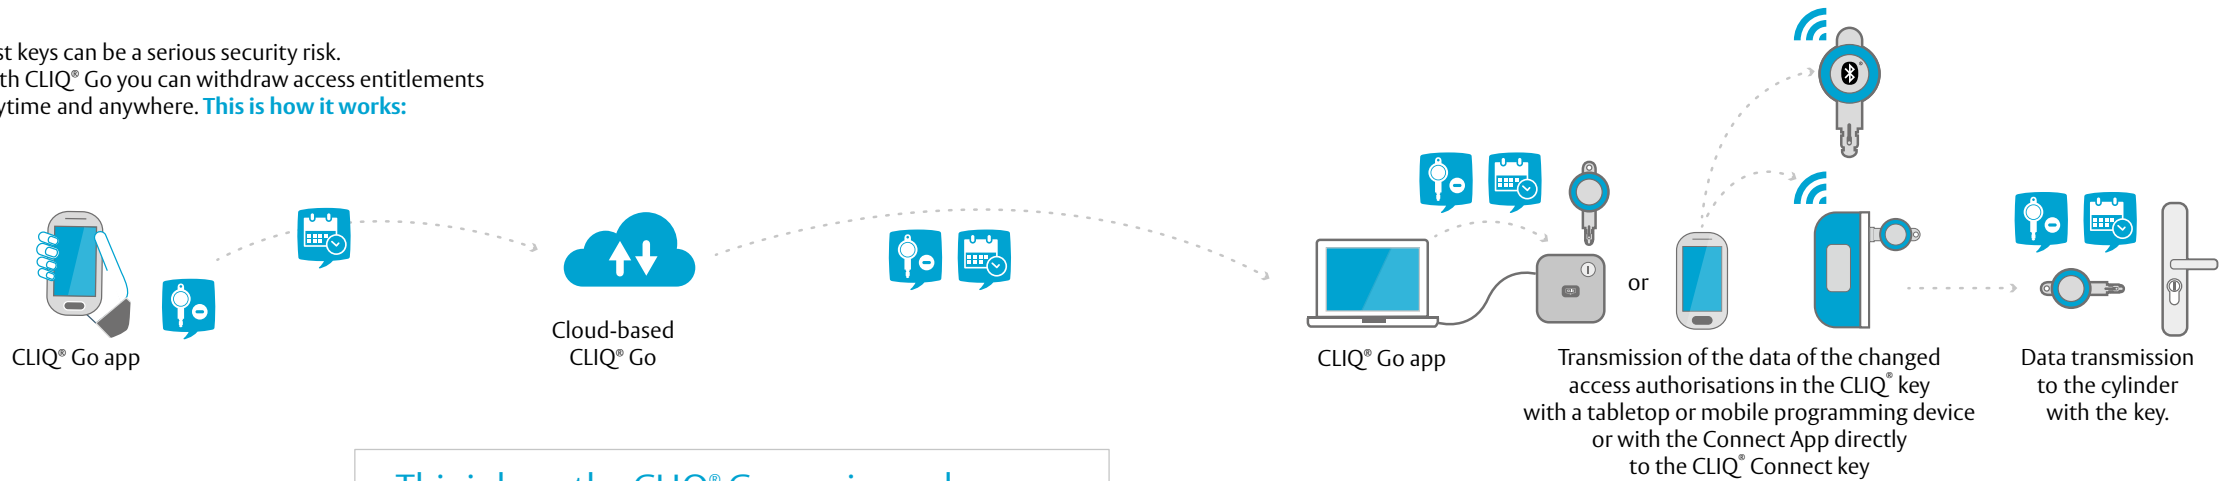

2 After the key has been blocked, an additional key is programmed with the changed access entitlements – the process can be followed on all devices on which the CLIQ® Go app is installed.

3 When this key is inserted in the cylinder of a relevant door, the new access entitlements are transferred. The lost key can no longer lock this cylinder and all other authorised keys continue to have free access.

Lost keys can be a serious security risk. With CLIQ® Go you can withdraw access entitlements anytime and anywhere. **This is how it works:**

CLIQ® Go app

Cloud-based CLIQ® Go

CLIQ® Go app

or

Transmission of the data of the changed access authorisations in the CLIQ® key with a tabletop or mobile programming device or with the Connect App directly to the CLIQ® Connect key

Data transmission to the cylinder with the key.

This is how the CLIQ® Go app is used:

· Select the user key
· Withdraw access entitlements for the lost key and create a new key with entitlements (e.g. schedule and door) or change the access entitlements for an available key
· Optional: Program the key directly with the programming device while on the move or use the Connect App and a CLIQ® Connect key
· The newly programmed key transfers the new access entitlements to the cylinder of a relevant door when it is inserted
