door opening solutions

Reference project:

Sparda-Bank in Hamburg trusts in access control by ASSA ABLOY

Sparda-Bank Hamburg uses SCALA combined with Aperio® technology - a flexible, secure and extremely powerful access control solution.

Characteristics

Object:	Sparda-Bank Hamburg eG
Branch:	Banking and Finance
Building:	Main building, 20 branches and further self-service locations
ASSA ABLOY solution:	SCALA EAC system (effeff brand) with Aperio® (ASSA ABLOY brand)
ASSA ABLOY partner:	Räber Kommunikationstechnik GmbH, Hamburg

Challenge

With more than 240,000 members, Sparda-Bank Hamburg is deeply rooted in Hamburg, Schleswig-Holstein and northern Lower Saxony. With a balance sheet total of around 3.8 billion euros and around 300,000 customers, it is the largest cooperative bank in northern Germany and is considered as one of the most innovative credit institutions in Germany. The cooperative

idea – to help its own members and the people in the region – is at the centre of the activities.

When planning a new access solution, it was clear for the bank: there was to be an installation of a flexible and modern access control system for the staff.

Solution

In order to increase transparency and minimise administrative work, Sparda-Bank is deploying a comprehensive electronic access control solution by ASSA ABLOY, which is optimally tailored to the individual requirements of the bank and offers security at every door:

authorisations are saved via online EAC systems in RFID authorisations. For security reasons, the validity period can be adjusted for the respective use authorisations. As a result, the bank has a better overview, can respond to organisational changes in real time and will only need to monitor a single security system. Users require just one locking medium. Mechanical keys are abandoned in favour of security and convenience. In order to meet the very high security requirements of a bank, ASSA ABLOY security locks are also used.

Furthermore, the access control solution offers a great advantage: if further buildings or branches are to be equipped, doors can be simply integrated without any major conversion work.

SCALA net allows a system structure integrated into a network and offers the fully range of functionality of an access control solution, for example, timers, zone monitoring or lift controllers. The access control system's simple installation and commissioning and its intuitive software interface make it easy to handle and expand.

Aperio® components are an essential part of the system: online electronic cylinders combined with online readers. This means that all access
